

A VIRTUAL COMMUNITY PRESENTATION

TSUNAMI EVACUATION ROUTES

IN CLATSOP COUNTY

Wednesday, October 19, 2022 | 6:00 p.m.

When the next great Cascadia Subduction Zone earthquake and tsunami occur, coastal residents and visitors will have 10-30 minutes to reach safety. Evacuation on foot will be the only means possible. To be prepared, people need answers to questions:

- What are the most efficient roads and trails to take to reach safety?
- How fast will people have to travel to beat the wave to safety?
- Will the earthquake cause bridges to become impassable or activate a landslide that blocks an escape route?
- If safe evacuation isn't feasible, what other preparations can be made?

Join Laura Gabel with the Department of Geology and Mineral Industries (DOGAMI) for this interactive virtual presentation to learn about the new [Beat the Wave map series](#), which show the same green safety areas as on DOGAMI's [tsunami evacuation maps](#), with the addition of arrows that indicate the most efficient routes. The quickest route may not be the obvious one, so it pays to study the map and practice your route.
